

KLERIS BIBA

Junior Web Developer · Frontend / Full-Stack

Tirana, Albania · +355 69 460 9873 · bibakleris@gmail.com

[LinkedIn](#) · [GitHub](#) · [Portfolio](#)

PROFILE

Junior web developer focused on frontend and full-stack roles. Runs Webris, a small freelance studio, delivering production client sites and apps — including a car-rental platform with a concurrency-safe Postgres booking system and an owner admin panel. Also builds personal full-stack projects, including a real-time emergency-coordination platform with Socket.io, WebRTC and MongoDB geo-queries. Comfortable across the full stack, from UI to API to database, and quick to learn new tools. Participant in NASA Space Apps and Junction 2025, and winner of the Western Balkans University tech award. Looking for a junior developer role.

SKILLS

Frontend: JavaScript, TypeScript, React, Next.js, HTML, CSS, Tailwind, Vite

Backend: Node.js, Express, REST APIs, PostgreSQL, Drizzle ORM, MongoDB, SQL, Socket.io, JWT auth, Zod

Tools & DevOps: Git/GitHub, VS Code, Docker, Vercel, Neon, Figma, Linux

Also familiar with: React Native (Expo), Mapbox, WebRTC, C, C++, C#, Python, basic networking

Languages: Albanian (native), English (C1), Italian (A2)

PROJECTS

Vitalis — Real-Time Emergency Coordination Platform · *TypeScript · MERN · Socket.io*

[\[GitHub\]](#)

- End-to-end platform coordinating medical emergencies, blood and medicine logistics, and teleconsultations in a single real-time network — built as a TypeScript monorepo with three frontends sharing one API.
- Built a desktop operator portal (React + Vite + Mapbox) and a mobile PWA + Expo React Native client for citizens and responders, with role-based access enforced server-side.
- Backend in Node.js + Express + MongoDB with GeoJSON 2dsphere indexes for geo-aware queries, Socket.io rooms for real-time SOS/dispatch, WebRTC for in-app video consults, and JWT access/refresh tokens with RBAC.
- Added a tamper-evident audit log using SHA-256 chained hashes for critical actions (SOS, dispatch, certificate issuance).

V.E Rental Car — Concurrency-Safe Booking Platform · *Next.js · Postgres · Drizzle*

[\[Live site\]](#)

- Bilingual (SQ/EN) car-rental platform for a real Tirana client — first Webris build with a real backend rather than static content.
- Enforced no-double-booking with a Postgres GiST exclusion constraint at the database layer, not just in application code.
- Shipped an owner admin panel: fleet CRUD with photo uploads, a booking queue, and a drag-to-blackout calendar, with cookie auth and DB-backed login throttling.

Webris Client Sites — Haxhij's House, Boka, BarberBook · *Next.js · Tailwind · Postgres*

[\[Haxhij's House\]](#) [\[BarberBook\]](#)

- Three more production client sites delivered end-to-end solo: two bilingual restaurant sites with real menus and delivery integration, and a bookings app with a Postgres backend.
- Handled the full cycle each time — requirements, content sourcing, design, deployment, fixes — one restaurant site shipped in 2 days from first reply to live production.

Workout Planner · *MERN · Deployed*

[\[GitHub\]](#)

- Full-stack workout planner letting users create, save and track personalized exercise routines.
- Built with the MERN stack using a clean frontend/backend split and a REST API; deployed to Vercel.

EXPERIENCE

Founder & Freelance Web Developer — Webris

2025 — Present

- Built and delivered 5+ production client sites and apps solo — from static restaurant sites to a full booking platform with a real Postgres backend.
- Ran the business side alongside development — client outreach, pricing, and closing paid work, including Webris's first-ever paid client.
- Optimized sites for SEO and performance, improving page-speed and Lighthouse scores.
- Handled the full cycle: client requirements, content sourcing, design, development, deployment, and post-launch fixes.

EDUCATION

Hermann Gmeiner Technical School — TIK Program

2023 — 2027 (expected)

High-school diploma in Information & Communication Technology. Coursework in programming (C, C++, Python), web development, databases and networking.

COMPETITIONS & ACHIEVEMENTS

Western Balkans University Tech Award — Winner

Recent

- Won €1,000 cash prize and a 50% tuition scholarship at Western Balkans University.

NASA Space Apps Challenge

2025

- Team member; contributed to a year-ahead weather-prediction app built on NASA Earth-observation data, with a React frontend consuming REST APIs for forecast visualization.

Junction — Europe's Largest Hackathon

2025

- Participated in the international hackathon (Finland), shipping a working prototype under a 48-hour deadline in a cross-functional team.
