Nationality

Albanian

PROFILE

Junior web developer focused on frontend and full-stack roles. Runs Webris, a small freelance studio, delivering production client sites and apps — including a car-rental platform with a concurrency-safe Postgres booking system and an owner admin panel. Also builds personal full-stack projects, including a real-time emergency-coordination platform with Socket.io, WebRTC and MongoDB geo-queries. Comfortable across the full stack, from UI to API to database, and quick to learn new tools. Participant in NASA Space Apps and Junction 2025, and winner of the Western Balkans University tech award. Looking for a junior developer role.

WORK EXPERIENCE

2025 — Present

Founder & Freelance Web Developer

Webris — freelance web development studio, Tirana, Albania

- Built and delivered 5+ production client sites and apps solo — from static restaurant sites to a full booking platform with a real Postgres backend.
- Ran the business side alongside development — client outreach, pricing, and closing paid work, including Webris's first-ever paid client.
- Optimised sites for SEO and performance, improving page-speed and Lighthouse scores.
- Handled the full delivery cycle: client requirements, content sourcing, design, development, deployment, and post-launch fixes.

EDUCATION AND TRAINING

2023 — 2027
(expected)

High-school diploma — Information & Communication Technology (TIK)

Hermann Gmeiner Technical School, Tirana, Albania

Coursework in programming (C, C++, Python), web development, databases and networking.

PERSONAL SKILLS

Frontend

JavaScript, TypeScript, React, Next.js, HTML, CSS, Tailwind, Vite

Backend

Node.js, Express, REST APIs, PostgreSQL, Drizzle ORM, MongoDB, SQL, Socket.io, JWT auth, Zod

Tools & DevOps

Git/GitHub, VS Code, Docker, Vercel, Neon, Figma, Linux

Also familiar with

React Native (Expo), Mapbox, WebRTC, C, C++, C#, Python, basic networking

LANGUAGE SKILLS

Mother tongue(s)			Albanian		
Other language(s)	UNDERSTANDING		SPEAKING		WRITING
	Listening	Reading	Spoken interaction	Spoken production	
English	C1	C1	C1	C1	C1
Italian	A2	A2	A2	A2	A2

Levels: A1/A2 Basic user — B1/B2 Independent user — C1/C2 Proficient user. Common European Framework of Reference for Languages.

PROJECTS

2026

Vitalis — Real-Time Emergency Coordination Platform

(TypeScript · MERN · Socket.io)

- End-to-end platform coordinating medical emergencies, blood and medicine logistics, and teleconsultations in a single real-time network — built as a TypeScript monorepo with three frontends sharing one API.
- Built a desktop operator portal (React + Vite + Mapbox) and a mobile PWA + Expo React Native client, with role-based access enforced server-side.
- Node.js + Express + MongoDB backend with GeoJSON 2dsphere indexes, Socket.io rooms for real-time SOS/dispatch, WebRTC video consults, and JWT access/refresh tokens with RBAC.

2026	V.E Rental Car — Concurrency-Safe Booking Platform <i>(Next.js · Postgres · Drizzle)</i> - Bilingual (SQ/EN) car-rental platform for a real Tirana client — Webris's first build with a real backend rather than static content. - Enforced no-double-booking with a Postgres GiST exclusion constraint at the database layer, not just in application code. - Shipped an owner admin panel: fleet CRUD with photo uploads, a booking queue, and a drag-to-blackout calendar, with cookie auth and DB-backed login throttling.
2025 — 2026	Webris Client Sites — Haxhiaj's House, Boka, BarberBook <i>(Next.js · Tailwind · Postgres)</i> - Three more production client sites delivered end-to-end solo: two bilingual restaurant sites with real menus and delivery integration, and a bookings app with a Postgres backend. - Handled the full cycle each time — requirements, content sourcing, design, deployment, fixes — one restaurant site shipped in 2 days from first reply to live production.
2025	Workout Planner <i>(MERN · Deployed)</i> - Full-stack workout planner letting users create, save and track personalised exercise routines. - Built with the MERN stack using a clean frontend/backend split and a REST API; deployed to Vercel.

ACHIEVEMENTS & AWARDS

- Western Balkans University Tech Award — Winner (Recent)**
Won €1,000 cash prize and a 50% tuition scholarship at Western Balkans University.
- NASA Space Apps Challenge (2025)**
Team member; contributed to a year-ahead weather-prediction app built on NASA Earth-observation data, with a React frontend consuming REST APIs for forecast visualisation.
- Junction — Europe's Largest Hackathon (2025)**
Participated in the international hackathon (Finland), shipping a working prototype under a 48-hour deadline in a cross-functional team.
